/note="Organ: Pool of sugarcane calli submitted to low (4oC) and high (37 C) temperature stress; Vector: pslurScript; Site 1: EcoRI; Site 2: XhoI; An unidirectional cDNA library generated from [Pool of sugarcane calli submitted to low (4oC) and high (37 C) temperature stress]. cDNA was prepared from polyA+ mRNA using ZAP - cDNA Synthesis Kit (Stratagene). The double-strand cDNAs were fractionated in a sepharose CL-2B 40cm -columns and fragments sizing between 0.8 and 1.5 Kb were directionally cloned into the vector. Details of each source of RNA and library construction can be obtained at http://sucest.lad.ic.unicamp.br/public"

/note="Wector: Lambda ZAP-II XR.; Site_1: EcoR I; Site_2:
Xhol I; Several hundred adult Schistosoma japonicum
(Anhui, P.R. China, strain), of mixed sex, were perfused
from the mesenteries of experimentally infected mice and
rabbits at the Queensland Institute of Medical Research,
Brisbane, Australia (QIMR), and stored for several months
in liquid nitrogen. Subsequently, mRNA was isolated at the
QIMR from lysates of these worms by oligo dT
chromatography, using a kit from Pharmacia. The mRNA was
then shipped to Clontech, Palo Alto, CA, USA, who
constructed a cDNA library. First strand synthesis was
primed with an oligo-dT-XhoI-primer and synthesis was
primed with BCARI and T4 DNA polymerase. The
double stranded cDNA was ligated to EcoRI linkers,
digsered with EcoRI and XhoI, and ligated into the
phagemid vector lambda ZAP II XR. After construction of
this directional library by Clontech, it was returned to
the QIMR. During analysis of the library at the QIMR, we
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    hanzg@chgc.sh.cn

/khol I; Several hundred adult Schistosoma japonicum
(Anhui, P.R. China, strain), of mixed sex, were perfused
from the mesenteries of experimentally infected mice and
rabbits at the Queensland Institute of Medical Research,
Brisbane, Australia (GJMR), and stored for several months
in liquid nitrogen. Subsequently, mRNA was isolated at the
GIMR from lysates of these worms by oligo dT
chromatography, using a kit from Pharmacia. The mRNA was
then shipped to Clontech, Palo Alto, CA, USA, who
constructed a cDNA library. First strand synthesis was
primed with an oligo-dT-Xhol-primer and synthesis was
primed with RNAse H and T4 DNA polymerase. The
double stranded cDNA was ligated to Rocal linkers,
digested with EcoRI and XhoI, and ligated into the
phagemid vector lambda ZAP II XR. After construction of
the QIMR. During analysis of the library at the QIMR, we
have found that a small percentage, 2% to 3%, of the
clones contain inserts that appear to be highly homologous
to sequences from salmonoid fishes, as determined by
homology comparisons using BLAST and by Southern
hybridization analysis to genomic DNA from salmon (Sigma
chemical Co., St. Louis, MO) under stringent washing
conditions. The remainder of the clones appear to contain
                                                                                    Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               hanzg@chgc.sh.cn

Publication No. US20060123505A1

GENERAL INFORMATION:
APPLICANT: National Institute of Agrobiological Sciences.
APPLICANT: Bio-oriented Technology Research Advancement Institution
APPLICANT: The Institute of Physical and Chemical Research.
APPLICANT: Foundation for Advancement of International Science.
ITITLE OF INVENTION: FULL-LENGTH PLANT CDNA AND USES THEREOF
